Make a Google Map from a GPS file

Other map forms: Google Earth KML/KMZ, JPEG/PNG/SVG, Quantitative data

This form will automatically draw your GPS data (or KML/KMZ file, or plain text data in CSV or tab-delimited format) overlaid upon street maps and satellite imagery in Google Maps.

Please note that creating a map with a very large number of waypoints (or very long tracklogs, especially if speed or altitude colorization is enabled) can cause your Web browser to grind to a halt.

If you don't have GPS data and want to interactively draw on a map, use GPS Visualizer's "sandbox" to create your own GPX or KML file.

General map parameters

[show advanced options \[+\]](#)

 Width: pixels Height: pixels

 Full screen mode: No Title:

 Initial map type: Opacity:

Track options

[hide advanced options \[-\]](#)

 Max. points per track: Tickmark interval:

 Colorize by: Track (recommended) Default color:

 Track opacity: Line width:

 Colorize min.: Colorize max.:

 Lightness: Saturation:

 Spectrum direction: Hue 1: Hue 2:

 Custom spectrum file (URL):

 Color of values beyond min. or max.:

 Colorization legend: Yes Steps: Color blocks: No

 Default polygon opacity ("filled" tracks only):

 Draw an outline around all tracks: No

 Make tracks "clickable" (info window opens): Yes

 Preserve colors and widths from input files (e.g., from KML): Yes

 Build a floating list of all tracks: Names and descriptions

 Show distance and elevation gain/loss info: No

 Connect segments: Yes Reverse tracks: No

 Draw as waypoints:

 GPX/CSV routepoints:

 Remove all tracks: No

Waypoint options

[show advanced options \[+\]](#)

 Show waypoints:

 Waypoint display padding:

 Default marker color: Icon:

 Custom marker icon (URL):

 Waypoint labels: Permanent labels, on normal points AND trackpoints

 Generate list of markers: No Width: px

Contact information
