

Electromagnetic Theory and Applications for Photonic Crystals

Kiyotoshi Yasumoto *Kyushu University, Fukuoka-shi, Japan*

Series: Optical Science and Engineering Series **Volume:** 103

List Price: \$119.95

Cat. #: DK5845

ISBN: 0849336775

Publication Date: 10/14/2005

Number of Pages: 464

Availability: In Stock

- Provides comprehensive theoretical treatment of periodic structures based on general electro-magnetic theory
- Presents the original work of the authors, all recognized experts in their fields
- Builds a theoretical basis for periodic structures applicable to photonic crystals in optical to microwave regions
- Progresses smoothly and logically from analytical to numerical to computational approaches
- Illustrates the discussion with more than 250 figures and 1000 equations

Photonic technology promises much faster computing, massive parallel processing, and an evolutionary step in the digital age. The search continues for devices that will enable this paradigm, and these devices will be based on photonic crystals. Modeling is a key process in developing crystals with the desired characteristics and performance, and *Electromagnetic Theory and Applications for Photonic Crystals* provides the electromagnetic-theoretical models that can be effectively applied to modeling photonic crystals and related optical devices.

The book supplies eight self-contained chapters that detail various analytical, numerical, and computational approaches to the modeling of scattering and guiding problems. For each model, the chapter begins with a brief introduction, detailed formulations of periodic structures and photonic crystals, and practical applications to photonic crystal devices. Expert contributors discuss the scattering matrix method, multipole theory of scattering and propagation, model of layered periodic arrays for photonic crystals, the multiple multipole program, the mode-matching method for periodic metallic structures, the method of lines, the finite-difference frequency-domain technique, and the finite-difference time-domain technique.

Based on original research and application efforts, *Electromagnetic Theory and Applications for Photonic Crystals* supplies a broad array of practical tools for analyzing and designing devices that will form the basis for a new age in computing.

NEW!*Illuminating Tools for Next-Generation Devices*

Electromagnetic Theory and Applications for Photonic Crystals

FEATURES

- Provides comprehensive theoretical treatment of periodic structures based on general electromagnetic theory
- Presents the original work of the authors, all recognized experts in their fields
- Builds a theoretical basis for periodic structures applicable to photonic crystals in optical to microwave regions
- Progresses smoothly and logically from analytical to numerical to computational approaches
- Illustrates the discussion with more than 250 figures and 1000 equations

Reveals a Broad Spectrum of Modeling Methodologies

Photonic technology promises much faster computing, massive parallel processing, and an evolutionary step in the digital age. The search continues for devices that will enable this paradigm, and these devices will be based on photonic crystals. Modeling is a key process in developing crystals with the desired characteristics and performance, and **Electromagnetic Theory and Applications for Photonic Crystals** provides the electromagnetic-theoretical models that can be effectively applied to modeling photonic crystals and related optical devices.

The book supplies eight self-contained chapters that detail various analytical, numerical, and computational approaches to the modeling of scattering and guiding problems. For each model, the chapter begins with a brief introduction, detailed formulations of periodic structures and photonic crystals, and practical applications to photonic crystal devices. Expert contributors discuss the scattering matrix method, multipole theory of scattering and propagation, the model of layered periodic arrays for photonic crystals, the multiple multipole program, the mode-matching method for periodic metallic structures, the method of lines, the finite-difference frequency-domain technique, and the finite-difference time-domain technique.

Based on original research and application efforts, **Electromagnetic Theory and Applications for Photonic Crystals** supplies a broad array of practical tools for analyzing and designing devices that will form the basis for a new age in computing.

Catalog no. DK5845, January 2006, 464 pp.
ISBN: 0-8493-3677-5, \$119.95 / £68.99

Edited by
Kiyotoshi Yasumoto
Kyushu University, Fukuoka, Japan

A volume in the *Optical Science
and Engineering* series

Edited by
Brian J. Thompson
University of Rochester, New York, USA

Contents

SCATTERING MATRIX METHOD APPLIED TO PHOTONIC CRYSTALS; *Daniel Maystre, Stefan Enoch, and Gérard Tayeb*

Introduction
Scattering Matrix Method
Combination of Scattering Matrix and Fictitious Sources Methods
Dispersion Relations of Bloch Modes
Theoretical and Numerical Studies of Photonic Crystal Properties
Conclusion
References

FROM MULTIPOLE METHODS TO PHOTONIC CRYSTAL DEVICE MODELING; *Lindsay C. Botten, Ross C. McPhedran, C. Martijn de Sterke, Nicolae A. Nicorovici, Ara A. Asatryan, Geoffrey H. Smith, Timothy N. Langtry, Thomas P. White, David P. Fussell, and Boris T. Kuhlmeier*

Introduction
Multipole Theory for Finite and Infinite Structures
Multipole Modeling of Photonic Crystal Fibers
Radiation Dynamics and the Local Density of States
Bloch Mode Analysis of Composite PC Devices
Modeling of Photonic Crystal Devices
Discussion and Conclusions
Acknowledgement
References

MODELING OF PHOTONIC CRYSTALS BY MULTILAYERED PERIODIC ARRAYS OF CIRCULAR CYLINDERS; *Kiyotoshi Yasumoto and Hongting Jia*

Introduction
Scattering by a Single Cylinder
Scattering by a Periodic Array of Cylindrical Objects
Two-Dimensional Scattering from Layered Periodic Arrays
Three-Dimensional Scattering from Layered Crossed-Arrays
Modal Analysis of Two-Dimensional Photonic Crystal Waveguides
Numerical Examples
Conclusions
References

See reverse side for continuation of Contents and ordering information

SIMULATION AND OPTIMIZATION OF PHOTONIC CRYSTALS USING THE MULTIPLE MULTIPOLE PROGRAM;

Christian Hafner, Jasmin Smajic, and Daniel Erni

Introduction and Overview
Introduction to Photonic Crystal Simulation
Basics of the Multiple Multipole Program
Handling Periodic Symmetries while Using Periodic Boundary Conditions
Advanced MMP and MAS Eigenvalue Solvers
Computation of Waveguide Modes in Photonic Crystals
Computation of Waveguide Discontinuities
Sensitivity Analysis of Photonic Crystal Devices
Optimization Based on the Sensitivity Analysis
Achromatic 90° Bend
Filtering T-Junction
Conclusions and Outlook
Acknowledgement
References

MODE-MATCHING TECHNIQUE APPLIED TO METALLIC PHOTONIC CRYSTALS;

Hongting Jia and Kiyotoshi Yasumoto

Introduction
Analysis of a Metallic Array Composed of Rectangular Cylinders

Analysis of Photonic Crystals Consisting of Metallic Cylinders with Arbitrary Cross Section

Analysis of Metallic Photonic Crystals for a General Incidence

Scattering Analysis of Crossed Photonic Crystals Consisting of Arbitrarily Shaped Cylinders

Diffraction from a Conductive Slab Cut Periodically by Rectangular Holes

Scattering Analysis of a Conductive Slab Cut Periodically by Rectangular Holes in an Arbitrary Direction

Conclusion
Acknowledgement
References

THE METHOD OF LINES FOR THE ANALYSIS OF PHOTONIC BANDGAP STRUCTURES;

Reinhold Pregla and Stefan F. Helfert

Introduction
Basic Theory
Impedance/Admittance Transformation
Determination of Floquet Modes
Determining the Band Structures of Photonic Crystals
Junctions in Photonic Crystal Waveguides
Numerical Results
Conclusion
Acknowledgement
References

APPLICATIONS OF THE FINITE-DIFFERENCE FREQUENCY-DOMAIN MODE SOLUTION METHOD TO PHOTONIC CRYSTAL STRUCTURES;

Chin-Ping Yu and Hung-Chun Chang

Introduction
The FDFD Model
Modal Analysis of Photonic Crystal Fibers
The FDFD Method for Analysis of Photonic Band Structures
Calculation of 2D PC Band Diagrams
Modal Analysis of Planar PC Waveguides
Conclusion
Acknowledgements
References

FINITE-DIFFERENCE TIME-DOMAIN METHOD APPLIED TO PHOTONIC CRYSTALS;

Hiroyoshi Ikuno and Yoshihiro Naka

Introduction
Method of Solution
Photonic Crystal Straight Waveguide
Fundamental Optical Circuit Devices Using Photonic Crystals
Wavelength Multi/Demultiplexer
Conclusion
References

INDEX

Please use this ORDER FORM, CALL or ORDER ONLINE at WWW.CRCPRESS.COM

Please indicate quantities next to the title(s) ordered below:

ELECTROMAGNETIC THEORY AND APPLICATIONS FOR PHOTONIC CRYSTALS

.....Catalog no. DK5845, ISBN: 0-8493-3677-5 at \$119.95 / £68.99 each.

Other titles of interest:

ELECTROMAGNETIC COMPATIBILITY HANDBOOK

.....Catalog no. 2087, ISBN: 0-8493-2087-9 at \$149.95 / £85.00 each.

NONLINEAR OPTICS: THEORY, NUMERICAL MODELING, AND APPLICATIONS

.....Catalog no. DK2121, ISBN: 0-8247-0965-9 at \$159.95 / £92.00 each.

ORGANIC ELECTROLUMINESCENCE

.....Catalog no. DK3006, ISBN: 0-8247-5906-0 at \$139.95 / £79.99 each.

Ordering Information: Orders must be prepaid or accompanied by a purchase order. Checks should be made payable to CRC Press. Please add the appropriate shipping and handling charge for each book ordered. All prices are subject to change without notice. If purchasing by credit card please be sure to include the 3 digit security code that appears on the back of your card in the "sec code" field provided below.
U.S./Canada: All orders must be paid in U.S. dollars. TAX: As required by law, please add applicable state and local taxes on all merchandise delivered to CA, CT, FL, KY, MO, NY, and PA. For Canadian orders, please add GST. We will add tax on all credit card orders.
European Orders: All orders must be paid in U.K. £. VAT will be added at the rate applicable.
Textbooks: Special prices for course adopted textbooks may be available for certain titles. To review a book for class adoption, contact our Academic Sales Department or submit your textbook evaluation request online at www.crcpress.com/eval.htm
Satisfaction Guaranteed: If the book supplied does not meet your expectations, it may be returned to us in a saleable condition within 30 days of receipt for a full refund.

SHIPPING AND HANDLING

Region	Delivery Time	First Title	Additional Title	For priority mail services, please contact your nearest CRC PRESS office.
USA/Canada	3-5 Days	\$5.99	\$1.99	
South America	7-14 Days	\$9.99	\$3.99	
Europe	3-5 Days	£2.99	£0.99	
Rest of World	7-21 Days	£4.99	£2.99
